Summary

Computer Science (AI & ML) student with hands-on experience developing backend applications, REST APIs, database-driven systems, and AI-powered solutions. Strong foundation in Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, and Computer Networks. Skilled in Python, SQL, FastAPI, PostgreSQL, Git, and AI/ML technologies including RAG and multi-agent systems. Strong problem-solving ability demonstrated through competitive programming and software development projects.

Education

B.Tech in CSE (AI & ML) <i>B V Raju Institute of Technology</i>	Expected 2027 CGPA: 8.33/10
Diploma in Computer Science Engineering <i>St. Mary's Group of Institutions</i>	2021 – 2024 CGPA: 8.96/10

Technical Skills

Languages	Python, SQL
Core CS	Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
Backend	FastAPI, REST APIs
Databases	PostgreSQL, ChromaDB
AI / ML	RAG, LangGraph, LangChain, NLP, Prompt Engineering
Tools	Git, GitHub, Streamlit, Google Colab

Projects

Academic Regulations AI Assistant github.com/SHIVAKUMARJATLA/ai-rag-assistant
LangGraph • FastAPI • ChromaDB • LLaMA 3 • PostgreSQL

- Built a Retrieval-Augmented Generation system to answer academic regulation queries from unstructured academic documents.
- Developed a document processing pipeline using text chunking, embeddings, vector search, and LLM-based response generation.
- Used ChromaDB for semantic document search and PostgreSQL for storing query logs and structured metadata.
- Implemented RESTful FastAPI endpoints to expose the RAG system as a backend service.

TripOrchestrator – Multi-Agent AI Travel Planner github.com/SHIVAKUMARJATLA/TripOrchestrator
LangGraph • LangChain • FastAPI • PostgreSQL • Groq • Tavily API

- Developed a multi-agent AI travel planning system using LangGraph to coordinate travel search, itinerary generation, and response synthesis.
- Built FastAPI REST endpoints to process natural-language travel requests and return structured travel plans.
- Integrated external APIs including AviationStack and Tavily to retrieve travel-related information.
- Implemented PostgreSQL-backed conversation state storage to support context-aware multi-turn interactions.

Movie Recommendation System github.com/SHIVAKUMARJATLA/Movie-Recommendation
Python • FastAPI • Streamlit • TF-IDF • Cosine Similarity

- Developed a content-based movie recommendation system using TF-IDF vectorization and cosine similarity.
- Built FastAPI REST endpoints for movie search and recommendation queries.
- Created a Streamlit interface to test and demonstrate personalized movie recommendations.

Achievements

- **Rank 1 out of 1,153 participants** in the *Speed and Accuracy – 210* coding contest conducted by Being Zero, demonstrating strong problem-solving ability under time pressure.

Certifications

Data Analytics with Python – NPTEL | Python – HackerRank | SQL – HackerRank
